## DE MEEST GEBRUIKTE AQUARIUMPLANTEN IN AQUARIUM EN AQUASCAPING

Deze publicatie bevat de meest voorkomende aquarium/ aquascape planten die redelijk eenvoudig te verkrijgen zijn.

De planten zijn onderverdeeld in de meest gebruikte:

- achtergrondplanten
- middenplanten
- voorgrondplanten
- bodembedekkers
- epifyten
- mossen
- rotala's

Bij elke plant staat de moeilijkheidsgraad vermeld. Alle planten zijn ingedeeld in de categorie **Easy, Medium en Advanced**.

|                                                                                              | lumen per liter | CO2         |
|----------------------------------------------------------------------------------------------|-----------------|-------------|
|  EASY     | 10 - 20         | 4 - 10 ppm  |
|  MEDIUM   | 20 - 40         | 10 - 20 ppm |
|  ADVANCED | > 40            | 20 - 30 ppm |

We hebben het hier over gemiddelde licht- en CO2 behoeften voor de plant. Maar vanzelfsprekend is elk aquarium en elke aquascape anders, daarom is de lijst met indeling geen absoluut.

We hebben immers te maken met verschillende omgevingscondities zoals bodem, bodemopbouw, CO2, watersamenstelling, plantbemesting en belichting.

En al deze factoren zijn van invloed op de ontwikkeling, kleur, vorm en groeisnelheid van de plant.

Daarbij is de afmeting van een aquarium bepalend; een 'middenplant' in een aquarium van 500 liter zal in een 40 liter aquarium als achtergrondplant dienen.

De lijst met planten is niet compleet

Er zijn namelijk nog vele variaties op plantensoorten en dan spreek je al snel over het aantal van >500.

Maar dit overzicht bevat de meest gebruikte planten die relatief makkelijk te verkrijgen zijn
